

# History

## v1.0.3

- Improved the regexes

## v1.0.2

- Updated to use v4.6.1 .Net
- Updated documents
- Added validation to ensure the output parameter value is a directory

## v1.0.1

- Added ability to supply multiple file extensions
- Added the ability to identify oddly located files e.g. root of key system folders
- Modified the -o (output) parameter to be a directory rather than a file

## v1.0.0

- Initial public release
